

## HEALTH SERVICES

Health services are provided by Public Health Nurses or other trained professionals and include services necessary to enable a child to benefit from other early intervention services that the child is receiving. These services include clean intermittent catheterization, tracheostomy care, tube feeding, the changing of dressings or colostomy collection bags, etc.

Health services are determined & provided in consultation with medical providers. These services do not include surgeries, purely medical services (e.g. hospitalization, prescribing medication), or routine health services such as immunizations & "well-baby" check-ups.
