DOB \_\_\_\_\_

Enclosed are current assessment results for your patient. Please contact me if you have any questions or concerns. Your input is always appreciated!

Empirical evidence demonstrates that early delays predict later delays; most children will not simply "grow out of it" without early intervention services. Children who are not referred the first time someone has a suspicion miss the chance to receive therapy when its impact of their development can be the greatest, so your early identification and referral are important in determining a child's prognosis. On the reverse side of this card is a list of early predictors of later delays.
